

PROBONDdécor[®]

Mirror Finish

TYPICAL SPECIFICATION

Composite panels shall be PROBOND Décor[®] Mirror Finish as manufactured and supplied throughout Australia exclusively by PROBOND[®] Architectural.

PROBOND Décor[®] panels shall consist of 2 face sheets of 0.30mm thick aluminium sandwiching a core of pure LDPE (low density polyethylene), formed in a continuous process.

PROBOND Décor[®] panels shall consist of an overall thickness of 3mm.

Face sheet shall be mirror finish as selected from the PROBOND Décor[®] range and applied by continuous coil coating process. The rear face of the panel shall have undercoat coat finish. Spray application not acceptable. Applied coating shall be protected with peelable UV stabilised PE protective film.

All PROBOND Décor[®] panels prior to fabrication shall be stored horizontally on a dry, flat, level surface and protected from damage from other trades.

Fabrication techniques as recommended by PROBOND[®] Architectural shall be strictly adhered to. These include cutting, grooving, folding, bending and rolling. Information concerning these techniques can be obtained from PROBOND[®] Architectural.
